

## **ACD Goes Android™: M260TE mobile terminal with Android™ Industrial+ - quality made in Germany**

**The bestseller in warehouse logistics, the M260TE mobile terminal from ACD Elektronik GmbH, will now also be available in an Android™ Industrial+ version. The advantages are plain to see: Modern user guidance familiar to users of Android™ smartphones, together with the quality of the German manufacturer!**

### **Why Android™ Industrial+?**

Unlike all competitors, who often use products from Asian manufacturers, the Android™ Industrial+ version can be selectively adapted to customer needs at any time. That means hardware components that require fundamental adjustments to the operating system can also be integrated. Easy app programming by an ACD developer team specializing in Android means customers can use the terminal in different processes. ACD Elektronik GmbH also takes responsibility for support, incorporates security updates, and provides assistance with troubleshooting as well as rapid response to security gaps. The advantage of communicating directly with a German manufacturer is unique on the market and greatly reduces complications.

### **ACD will be using both operating systems in the future**

To continue offering customers the solution that is right for them, ACD Elektronik GmbH will pursue two paths in regards to operating systems, Windows® and Android™. It is also possible to convert the M260TE mobile terminal from Windows® to Android™. ACD Managing Director Andreas Zwißler explains: "The flexible choice of operating system and a wide range of equipment features, for example the proven fast input keyboard, offer users precisely the features and functionalities that are important in mobile applications." The future potential and flexibility of this solution translate into attractive advantages for customers.

Enhanced development of the M260TE mobile terminal is the logical response to growing customer demand for Android™ operating systems in the B2B environment. It further expands the extensive product range of mobile devices for every application in logistics and industry. Nothing has changed in the familiar advantages of the M260TE: The handheld device which is ideally suited for scanning-intensive activities is also equipped with a powerful NXP processor to ensure maximum productivity in mobile applications. The M260TE with Android™ also features impressively simple user navigation while the modern operating system with its familiar operating environment ensures a high level of employee satisfaction. An integrated rechargeable battery for long battery runtimes and high-quality scanners ensure fast, efficient and error-free work in industrial environments.

The M260TE mobile terminal with Android™ Industrial+ still stands for the familiar quality and good service and support of the German manufacturer. All in all, the M260TE remains the optimum assistant for all warehouse and logistics processes and allows for easy, efficient and modern work in harsh environments.
